

Notes 1

What is Markdown?

Markdown is a markup language that let's me write plain text documents with a lightweight formatting options. (It's a simple way to make text look organized without fancy software.) Instead of clicking bold or underline buttons, I just type special symbols.

What is Git?

Git is a version control system. It's like a time machine for files.

- It keep tracks of all the changes I make so I can always go back if I mess something up.
- If more than one person is working on the same project, Git makes sure nobody overwrite someone
- Can also think of it as a "Save history"

What is GitHub?

GitHub is website where I can store projects that use Git. It helps with:

- Keeping my work online
- Sharing with others
- Working together with team

What is Slack?

Slack is a chat app for work or school. It's like discord, but made for teams.

- Can have channels(group chats) for different topics
- Send messages
- Share files and connect it with tools like Github or Google Drive
- Helps keep communication organized instead of sending tons of email.
